

# The Residences at Chestnut Hill

## Luxury Condominiums

This community of garden style and townhome buildings was created from an underutilized site in the heart of Chestnut Hill. Larger garden buildings of brick and precast trim invoke an established look. They are complimented by the brick and clapboard townhomes on the more private rear of the site. A theme of stonewalls, extensive landscaping and copper roof accents unify the entire complex. This development is marketed towards upper class empty nesters that desire the finer things in life. The convenient location to downtown Boston makes it an ideal suburban setting.
